

## Enjoy a Healthy Edge for a Healthy Future!

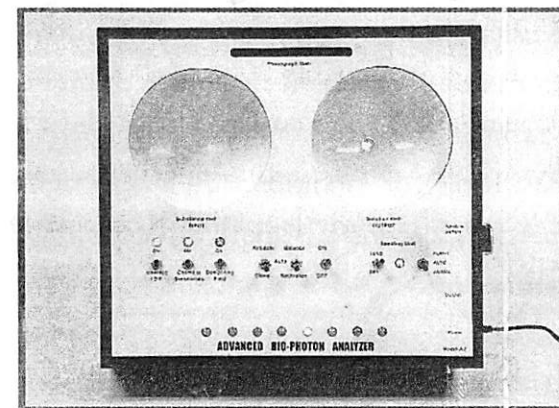

Natural healing enthusiasts around the world use this strategy to help maintain a healthy state for themselves, their families, and pets. We believe this cutting edge technology can help everyone achieve a healthy edge for a healthy future!

The Advanced Bio-Photon Analyzer is designed with the chemically sensitive and environmentally sensitive person in mind.

## Advanced Bio-Photon Analyzer

## On The Cutting Edge Of Technology

# Advanced Bio-Photon Analyzer Model-A2

The ABPA was designed to use Subtle Energy Data Scanning Technology to access imbalances in energy fields of a subject or object. The information gathered by these scans is used to create a strategy to counter stressors that interfere with ideal structure or function. These counter-measures are then communicated back in the form of individually customized, energetic, Intrinsic Isopathic Restorative Structures.

The purpose of these intrinsic energies is to help the energy fields become stable and balanced. When energy is balanced successfully and stress is reduced, the body's natural healing process can be efficiently optimized.

The focus of this instrument is to reduce negative effects of stressors in the environment, which overload the energy handling systems of the body.

It is also designed to increase access to usable energy, improving the overall function and performance of the body's self-regulating mechanisms.

Working to cancel out negative fields, bringing positive fields into balance, and boosting general vitality is the result of this dynamic communication.

## Exciting Benefits

- Builds reserve energies
- Supports natural healing
- Enhances feeling of well being
- Reduces stress on the body's energetic system from chemical residue in food and the environment around us
- Is as safe as it is easy to use

## Proprietary Software

- Creates a baseline for analyzing stress
- Scans positive informational fields to promote balance and harmony
- Scans patterns of negative informational fields for overload and stress
- Uses the exact opposite of an interfering field as a strategy for countering stress

## Automated Scanning Process

- Automated function controlled by the placement of the switches
- Forty second scanning cycle

## Safety Features

Built-in safety features confirm there is a benefit before any Isopathic Restorative Structures interact with a research subject.

## Output Capabilities

- Photonic Isopathic Imprinter
- Sending/Broadcasting Unit
- Ten Foot Scan/Output Cable
- Multiple Informational Potencies
- Restorative Structures Customized to Research Subject
